1.	<p>I have been asked to provide further information about the samples recovered during the forensic examination of the driver's airbag AW/2.</p> <p>On the 17 June 2021, I examined the airbag for the presence of blood and hairs. None were found. I then recovered cellular material from the centre front of the airbag using two adhesive minitapes. These minitapes were collectively exhibited as AW/2/JW/1. Following this, I examined the outside surfaces of the airbag for the presence of saliva using a presumptive chemical screening test. An area of the centre front of the airbag measuring approximately 10cm x 8cm gave a strong positive reaction, and this area was swabbed to recover any saliva / cellular material present.</p>
